

Software Architecture  
Course's Code: CSE 483  
Screaming Architecture  
(Chapter 7)

# Chapter 7

---

## **Chapter 7. Screaming Architecture**

- 7.1 What is screaming architecture?
- 7.2 Functional vs. categorical?
- 7.3 Advantages and disadvantages

# What is Screaming Architecture?

---

**Screaming architecture** is about structuring your application so that it is obvious what the intention of the application is.

**Or** Just by looking at a new project at a glance, get the core idea of what the project does and what it is about

# What is Screaming Architecture?

- Obvious intention
- Typical web application
- But what is the app about?
- It's a store app

# Chapter 6

---

## Chapter 7. Screaming Architecture

- 7.1 What is screaming architecture?
- 7.2 Functional vs. categorical?
- 7.3 Advantages and disadvantages

# Functional Cohesion vs. Logical Cohesion

- Make the intent obvious
- Structure around functional requirement
- Traditionally based on logical grouping
- Enforced by framework

## Chapter 7. Screaming Architecture

- 7.1 What is screaming architecture?
- 7.2 Functional vs. categorical?
- 7.3 Advantages and disadvantages

# Advantages and Disadvantages

---

## **Advantages**

Easier to find things

Easier to navigate the application

Better models the problem

# Advantages and Disadvantages

---

## Disadvantages

Lose convention-over-configuration benefits

Lose some automation

It's little trickier

More expensive at first
